

The virtualization market today spans all operating systems and server types and has been a game-changing technology for IT. Data Center virtualization provides efficiencies and capabilities that are not possible when constrained within a physical world. Whether your IT environment includes x86 systems, midrange systems, enterprise systems or a combination, VSS virtualization specialists have the ability to provide expert guidance across your organization.

STRATEGY AND ARCHITECTURE

Maximize your virtualization investment with strategy and architecture optimization. We review all aspects of virtualization including consolidation, performance evaluation, virtual machine security risks, virtual sprawl, licensing, compliance and management challenges.

MIGRATION

Our engineers develop custom migration plans based on proven virtualization methodologies. Services include technology validation, application virtualization, data migration and physical to virtual (P2V) migration.

DESIGN AND IMPLEMENTATION

From servers and storage to network and applications, our virtualization services cover designing and implementing full-scale virtual environments. Our goal is to connect end users to their data and apps on any device without sacrificing IT security and control.

DISASTER RECOVER DESIGN AND PLANNING

Critical to the virtualization journey, this service helps you design, plan and automate virtual environments to include failover, failback, non-disruptive testing and planned migrations.

BENEFITS

- Improve Efficiency
- Reduce Data Center Costs
- Centralize Storage
- Enable Application Availability
- Simplify Task Execution
- High Reliability & Performance
- Superior Security

SOLUTIONS

VMware vSphere
VMware vRealize

WHY VSS?

Our team has a combined 60 years of hands on virtualization experience with over 25 VMware specific certifications and in depth knowledge of IBM and Cisco environments.
