

PREVENT DATA AND NETWORK SECURITY BREACHES

Today's cybercriminals use some of the most sophisticated and stealthy techniques to access sensitive corporate networks - hijacking data to sell to the highest bidder or holding until ransom has been paid.

VSS and Plex let you discover your organization's vulnerabilities through proactive, repeated testing using the same tools and techniques that hackers use.

VSS + Plex Cyber Security Solutions let you answer these critical security questions

- Could I identify ransomware or other credible threats if they found their way into my inbox?
- Do our systems have security flaws?
- Can attackers penetrate into our company's network?
- How does our staff respond to malicious attacks like phishing, tailgating & fake wireless networks?
- How do our cyber security standards compare to industry best practices?

Through an exclusive partnership, VSS and Plex provide customized penetration test and security assessments based on your goals, external reconnaissance, scanning and testing of existing systems, internal vulnerability scanning, Red Team test events, business exploitation impact studies, multi-level reporting within our SRAF/NIST framework and tailored security training for your associates.

DIGITAL FORENSICS INCIDENT RESPONSE

THE PLEX ADVANTAGE

What's different about the VSS + Plex Offering?

Plex Solutions is accredited by the National Security Agency as part of the inaugural class of elite Vulnerability Assessment Services (VAS) providers under the NSA's National Security Cyber Assistance Program (NSCAP).

Our highly screened and vetted experts are led by cyber security trailblazers Terry Bradley and Stan Nolen, former US military intelligence officers who have dedicated their careers to offensive information security testing, information assurance and operations **as well as military-grade** cyber security. Our colleagues and partners span all areas of expertise and includes consultants with Top Secret/SCI Level Clearance.

WHY TRUST OUR TEAM?

Since 1990, VSS has been helping clients transform their business with people, process and technology – without introducing new risk. As internal and external threats increase in speed and scale, VSS and our Security partners help protect data against advanced, persistent cyberattacks.

Our experts' mature security strategies let organizations modernize operations while mitigating risk, transform identity and network access protocols, application development, privacy policies, and data security standards. Intelligent insight restores IT's power to respond to breaches in real time.
