

# AN AVERAGE DAY at an enterprise organization

**EVERY 36 MINUTES**  
sensitive data are sent  
outside the organization.

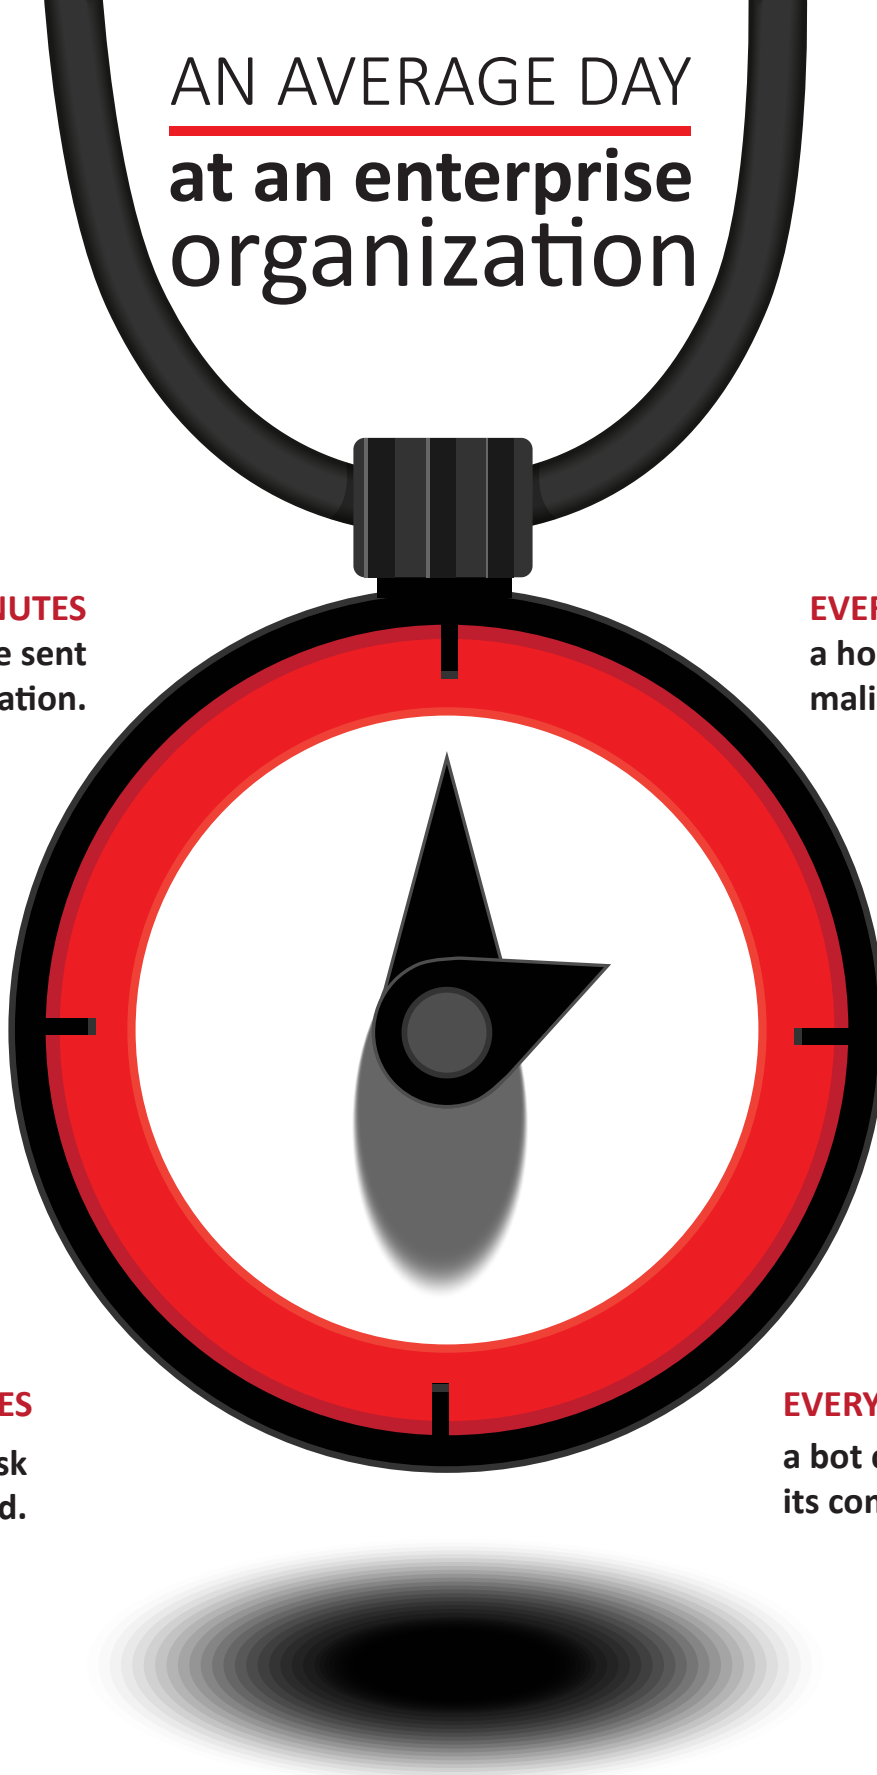

**EVERY 24 SECONDS**  
a host accesses a  
malicious website.

**EVERY 6 MINUTES**  
a known malware  
is downloaded.

**EVERY 34 SECONDS**  
an unknown malware  
is downloaded.

**EVERY 5 MINUTES**  
a high risk  
application is used.

**EVERY 1 MINUTE**  
a bot communicates with  
its command & control center.

The constantly evolving security landscape makes average days....hmm, let's call it a little more challenging.

We understand the day to day. Let's talk.
